Personal Statement

Professional Ruby on Rails developer involved in production of enterprise web applications with 6 years of commercial development experience.

Equally experienced in both: front-end and server side technologies. Being able to drive project from initial business analysis or architect stages to final release.

Rich background in direct communication with product owners on a daily basis as a team leader. Strong team player with solid experience in leaderships.

Easily follow any existing company's guidelines, or propose and introduce own based practices powered by my experience.

Technologies

Languages and Frameworks:

Ruby: Ruby on Rails, Sinatra, Hanami

Python: Django, PySide, PyGTK

Swift

Elixir: Phoenix

JavaScript: NodeJS, ECMAScript 2016 (ES7), Webpack / Brunch, jQuery, CoffeeScript, Vue (as hobby), React (as hobby)

CSS: CSS3, SCSS, SASS, Most modern frameworks such as bootstrap, materialize etc.

Project Management Tools:

Slack, Trello, Jira, Pivotal Tracker, Redmine, Asana, Basecamp, GitHub

Extensive knowledge working with various API:

Chargebee, Braintree, Stripe, Paypal, X.commerce etc.

Testing: RSpec, MiniTest, Factory Girl etc.

Good understanding of “SOLID” design principles.

Databases:

PostgreSQL, MySQL, MongoDB, Redis, ElasticSearch

Development Environment: OSX, Linux Arch or any Debian flavour

Can easily configure a Linux box from scratch for development or production use, including proper daemons and logging setup. Everything below super complicated multi-node setup.

DevOps: Capistrano / Mina, Heroku, Docker, Phusion Passenger, Nginx, Unicorn, Puma

Continuous Integration: CircleCI, Wercker, Jenkins, Travis

Source Code Management:

Git, Mercurial, Subversion

Employment / Projects

Pagesource Ltd | United Kingdom, Bristol
Lead Software Developer, Remote

2017 – Present

Projects:

- pagesource.com landing page builder (RoR / ES6)

Key Responsibilities:

- Design of initial architecture and after a period, taken over full further development of the project
- A-Z development planning, creating technical roadmap based on client requirements. Managing and maintaining all crucial services related to the project: Heroku, Trello, CI, Github, Profiling etc.
- Daily communication with the client in Slack and VoIP.

Description: Advanced landing page builder. Allows users to create from scratch or re-use already existing page templates from a rich collection. After pages being published, users can take it further by utilizing A/B testing and branching for making changes. Pagesource builder is designed with simplicity and performance in mind, which is a challenge on it's own due to JavaScript speed limitation by nature.

Mosties / CakeHR | UK, London / Latvia, Riga
Lead Software Developer, Onsite

2014 – 2017

Projects:

- Multiple Ruby on Rails projects every year
- CakeHR iOS app written in Swift

Key Responsibilities:

- Team Leadership, managing multiple RoR Agile teams simultaneously with daily progress report
- Initial architecture and design majority of projects. Helping organizing Ruby on Rails code so it's scalable. Paying close attention to RoR bottlenecks when it comes to enterprise level applications and suggesting appropriate solutions.
- Occasional speaker on internal company's seminars about process optimizations, new technologies and stacks review
- Organizing weekly meetings for code review, motivating developers for learning and writing better code
- Writing testable API documentation for 3rd party developers using services such as Apiary

Role Description: Analyzing and creating time estimates for every project, creating technical description and initial technical design. Composing and managing teams starting from initial requirement to finishing as complete product throughout Agile sprints. Every day use of project management tools such as Trello, Pivotal Tracker, Jira, Redmine and others.

Bagzee Ltd | UK, London / Latvia, Riga
Software Analyst, Onsite

2014 – 2015

Projects:

- Social network based on fashion top brands and retailers (RoR)

Technologies:

Ruby on Rails (4.1), MongoDB, Redis, Resque, Nokogiri, RSpec, JS Mocha, Capybara, Factory Girl, Rails i18n, Carrierwave, Fog, Kaminari, Devise, Capistrano, Faye, WebSocket, Sinatra, Foreman, Docker, Jenkins, MySQL, Twitter Bootstrap, CoffeeScript, Chrome browser extension, Firefox browser extension, Safari browser extension

Key Responsibilities:

- Project design decisions
- Software development heavy lifting and code review
- Point of contact. Customer communications.

Description: Social network based on top fashion brands and retailers. Parsing major US, Europe and Asian retailers for trending products. Users can share their favourite products and then receive desired updates from the service. Hand made intelligent engine which learns on users interactions and new trends published by world famous brands.

Aleutia Computers Limited | London, United Kingdom**2012 – 2013**

Senior Software Developer, Onsite

Projects:

- eClinics Client (PySide)
- eClinics Website (RoR)
- Company's Website (RoR)

Technologies:

Ruby on Rails, Refinery CMS, CSS3 (SCSS), HTML, jQuery, jQueryUI, AJAX, Highcharts, Responsive Design, Git, Heroku, Amazon S3 and CloudFront, RubyMine, Python, PySide, boto, PIL, PostgreSQL, SQLite3, RVM, CoffeeScript, Paperclip, RSpec

Key Responsibilities:

- Design and develop diagnostic medical software along with eClinic's website
- Aleutia Computers main website

Description: ABC (Access to Basic Care or eClinic) serves in total 80 clinics, providing treatment to nearly 7000 people per day for free. Patient records are synchronised by 3G to a secure server and mirrored in the cloud allowing any patient to have their record brought up at any clinic, providing powerful analysis and full-scaled statistics.

Fast-Dispatch Limited | London, United Kingdom**2011 – 2012**

Software Developer, Onsite

Projects:

- Fast-Dispatch website, eBay integration system (RoR)

Technologies: Ruby on Rails, CSS3 (SCSS), HTML, JavaScript, jQuery, AJAX, Git, Amazon S3, CloudFront, RubyMine, RMagick, X.commerce eBay API, PayPal API, REST, AWS-SDK, MySQL, Curb, XML, JSON, OAuth 2, OpenID Key

Responsibilities:

- Design and develop web app tightly integrated with eBay and PayPal
- Prototype and implement all business logic with X.commerce API
- Gather and process credit card and PayPal payments.

Description: Fast-Dispatch is a powerful eBay middleware for companies and high capacity eBay sellers. Allowing effortlessly group, sort and print labels for all account's orders on eBay in seconds. Making dispatch process much easier and saves resources for power sellers.

Skills

Languages:

English: Fluent (both spoken and written)

Russian: Native

European Citizenship (No work permit required in Europe)
